Work Experiences

Full-stack software engineer with 2+ years of professional experience building and deploying production systems across web, backend, and infrastructure. Experienced with .NET, Python, React, and cloud-native tooling, with a track record of delivering high-quality work in fast-moving, high-stakes environments.

Technologies

Programming Languages: Python, JavaScript, C#, TypeScript, SQL, Java, C
Frameworks & Libraries: Next.js, React.js, Node.js, TailwindCSS, Prisma, Flask, FastAPI, .NET Core
Databases/Cloud: PostgreSQL, SQL Server, MongoDB, Redis, Git, Linux Administration, Bash, Docker, AWS, Azure, Jenkins
Methodologies & Tools: OOPS, SDLC, Agile, Scrum, CI/CD, DevOps, Jira, Confluence, Nginx, REST
AI-Assisted Development: Claude Code, Cursor, Codex, Copilot. Efficient Prompt Engineering, output validation and ownership, deliberate tooling, technical debt awareness, Code Review

Work Experiences

Programmer Analyst Intern Jun 2025 – Present
Center for Human Services Research, SUNY RF Albany, NY

- Modernizing legacy infrastructure by migrating ASP.NET WebForms to a .NET Core API backend for the Healthy Families New York (HFNY) initiative, navigating the high complexity of a state-regulated database architecture that has evolved over 20 years
- Architecting RESTful services and utilizing .NET EF Core to streamline data tracking for 38+ sites, ensuring the integrity of longitudinal data for 5,000+ high-need families within a highly complex industry framework.
- Maintaining legacy infrastructure and delivering critical updates to ensure 24/7 reliability for production systems that manage intricate, decade-spanning data structures.

Software Engineer Jul 2023 – Jun 2024
OneAssure Bengaluru, India

- Integrated complex APIs from 3+ major insurance providers, managing cross-functional stakeholder communications to ensure seamless data flow across the OneAssure aggregator platform.
- Voluntarily led a massive code refactoring initiative, reducing redundant code by 80% and implementing industry best practices to improve long-term maintainability.
- Resolved critical client-facing issues by tailoring APIs to specific partner needs, ensuring high service reliability and prompt support
- Promoted to a full-time SDE within 2 months of interning due to high deliverable quality and technical adaptability.

Software Developer Feb 2023 – Jul 2023
Kalakumbh Remote, India

- Building scalable systems from scratch, I developed the backend foundation for a startup mobile app using Flask and MongoDB within a high-velocity team.
- Implemented a real-time chat system and researched technical solutions to resolve bottlenecks, transitioning ideas from the research phase into production features.

Education

University at Albany, SUNY Aug 2024 – May 2026
Master of Science in Computer Science Albany, NY

Projects

StashD | *Flask, Next.js, MongoDB, JWT, OTP, Cloudflare, monitoring Tailwind CSS, Docker* [Live App](#)

- Built and deployed StashD, a full-stack bookmark management web app using Next.js and Flask, featuring JWT-based authentication, OTP email verification via Resend API, and metadata auto-fetch — serving real users at mystashd.link
- Designed and implemented a Dockerized production architecture with Cloudflare Tunnel, automated deploy scripts, and health checks, enabling zero-downtime deployments and reliable uptime monitoring via Uptime Kuma and GlitchTip
- Engineered reusable React components including searchable dropdowns and favicon fallback handlers, alongside server-side metadata scraping with Cheerio via Next.js API routes, improving link preview accuracy and UI consistency
- Leveraged GitHub Copilot and Claude throughout development with deliberate prompt scoping, validating all AI output for correctness and maintainability rather than blind acceptance

Personal HomeServer & Private Cloud | *Linux, DHCP, DNS, Docker, Tailscale, Cloudflare, Nginx, Samba, Immich*

- Architected an extensible infrastructure on a Linux-based server to host a private cloud and NAS, prioritizing data privacy, hardware efficiency, and future service scalability.
- Implemented secure remote access using Nginx Proxy Manager and Cloudflare Tunnels, ensuring encrypted, zero-trust connectivity to self-hosted services without exposing open ports.
